- Represents zero or rounds to zero.

* Statistically different from zero at the 90-percent confidence level.

¹ The 2004 data have been revised to reflect a correction to the weights in the 2005 ASEC. The estimates also reflect improvements to the algorithm that assigns coverage to dependents.

² The data in this column are derived from estimates that include 2004 twice—the first in the 2003–2004 average and the second in the 2004–2005 average. Therefore, estimates in this column are equivalent to measuring half of the percentage-point difference between 2003 and 2005.

³ A 90-percent confidence interval is a measure of an estimate's variability. The larger the confidence interval in relation to the size of the estimate, the less reliable the estimate. For more information, see "Standard Errors and Their Use" at <www.census.gov/hhes/www/p60_231sa.pdf>.

⁴ Details may not sum to totals because of rounding.
